Aaron (AJ) Hervey

Product Designer | UX Designer | Front-End Developer

Vancouver, WA | (901) 573-4575 | adhervey.jr@gmail.com | Portfolio: ahervey.dev | linkedin.com/in/aahervey

SUMMARY

Product designer and front-end developer with 2+ years designing and shipping internal tools at Avangrid Renewables, from user interviews and usability testing to production React front-ends. Seeking product design roles, and software engineering roles with a strong UX focus.

EXPERIENCE

Full-Stack Developer | Avangrid Renewables | Vancouver, WA | Aug 2026 – Present

- Design and build internal web applications in React.js, Node.js and C#/ASP.NET for the ROADS operations team, writing SQL to surface operational data.
- Designed MEW2, a guided asset management interface that replaced writing SQL by hand, with two-column navigation, forms that adapt to each asset type and a review step before saving. Launched in three months, now rolling out further.
- Built MEW2 with Claude Code from my requirements, then tested its database writes in SSMS, reworked much of the visual design, and fixed a save bug that silently dropped attributes.
- Use Claude, Claude Code, GitHub Copilot and ChatGPT to plan refactors and chase bugs, reviewing and testing all output.
- Resolve JIRA tickets and serve in the on-call rotation, triaging failures across renewable generation sites.

Rotational Graduate, Software & Operations | Avangrid Renewables | Vancouver, WA | Aug 2024 – Aug 2026

- Redesigned and rebuilt CORE Alarms, the historical alarm lookup tool, as sole designer and developer: interviewed users, wireframed in Figma, built it in React and Node.js, and ran usability testing in staging. Still maintain it.
- Added column filtering, sorting, query validation and a searchable site picker in response to user research, and later migrated its queries, search and export from Oracle to SQL Server.
- Co-developed the Avangrid brand design system with contractors; migrated legacy web apps to React.js and Node.js.
- Validated asset data in the AVEVA PI SCADA system; performed lost-generation claims and ERCOT analysis.

Software Engineering Intern | Optum | Raleigh, NC | Summers 2022 and 2023

- Designed low- and high-fidelity Figma prototypes and built them in React and TypeScript, refined through usability tests.
- Built a release-notes automation platform and an internal discussion platform on Optum's design system.
- Presented sprint progress and retrospectives to business leaders and stakeholders in an Agile team.

IT Administrative Assistant, HPC Datacenter | University of Tennessee | Knoxville, TN | Jan 2021 – Jun 2022

- Ran hardware diagnostics on Dell PowerEdge servers and resolved user support tickets.

Undergraduate Researcher | University of Tennessee | Knoxville, TN | Jun 2020 – Aug 2020

- Interviewed local business owners and built a Qualtrics survey on COVID-19's impact on vulnerable populations; presented at the Eureka Conference.

DESIGN PROJECTS

MyChart Patient Portal Redesign, Lead Designer | Aug – Dec 2022

- Surveyed ~10 patients, ran contextual inquiries and built a persona; designed a high-fidelity Figma prototype with bottom tabs and a personal dashboard.

InTune Music Social App, Lead Designer | Jan – May 2023

- Led the high-fidelity Figma prototype, logo and design references on a team of three; surveyed listeners, mapped competitors and sketched wireframes. Now developing it into a real app.

EDUCATION

B.S., Computer & Information Sciences | University of Tennessee, Knoxville | Aug 2019 – May 2023
1794 Honors Program. Coursework: Human-Computer Interaction, UX Research & Testing, UI/UX Design, Algorithms & Data Structures

SKILLS

Design & Research: Product Design, UX Design, Figma, User Research, User Interviews, Surveys, Contextual Inquiry, Personas, Usability Testing, Wireframing, Prototyping, Information Architecture, Interaction Design, Design Systems

Engineering: JavaScript, TypeScript, React.js, Node.js, HTML/CSS, Chakra UI, Tailwind CSS, C#, ASP.NET, Entity Framework, SQL, SQL Server, PostgreSQL, C++, Python, AVEVA PI

Tools & Practices: Git, JIRA, Agile/Scrum, Claude Code, GitHub Copilot, Generative AI, Prompt Engineering
